POWER AND THE ENGINEER

INDEX FOR VOLUME XXX, 1909,

JANUARY 1 TO JUNE 30.

*** Explanatory Note.**

Illustrated articles are marked with an asterisk (*). Book notices are marked with a dagger (†). Cross references to a particular initial word may refer to any cognate work beginning in the same way. Thus, a reference from "Oil" to "Lubricant" would apply equally to "Lubricating," "Lubrication" or "Lubricator." The cross references condense the matter and assist the reader, but are not to be regarded as conclusive. So, if there were a reference from "Boiler" to "Furnace" and if the searcher failed to find the required article under the latter entry, he should not regard it as useless to turn back and look through all the "Boiler" entries, or others that the topic may suggest, as he would have done had there been no cross reference. Not all articles relating to a given topic necessarily appear under the same entries. Users of the index should bear in mind further that frequently more regard is paid to the actual contents of an article than to the precise title under which it appeared.
